AGENDA ITEM 6.f.

Assessment Committee
Update March, 2017

1. Assessment focus for our initial review will be at the program and institutional level. Course level review will be considered as it applies to program level review. This will lay the foundation for future curriculum mapping.

2. ICCs submitted to AASC for approval. All ICCs will be reviewed with each program with the Assessment Committee Members. The programs will select the ICCs that are most applicable to the individual program and how it can be assessed. Committee members will collect data regarding which ICCs the program chooses. The data will be evaluated to determine if our ICCs are broad enough to be useful in every program.

3. Assessment Committee Members will meet with their assigned program. The most recent assessment plan will be review for completeness and appropriateness, including measurable objectives, and applicable tools. Committee members will help where needed with programs to create the AY 16-17 assessment plan. Initial contacts have been positive and well received.

4. Program SLOs will be reviewed and evaluated for appropriateness, measurability, and how many are used. We will need consistent data collection over the next two years for our Systems Portfolio submission. Whenever possible, current SLOs should be assessed. If the determination is made that any SLOs are not relevant his would be a good time to facilitate change. Any
changes to Program SLOs should be approved by the Curriculum Committee and Advisory Boards. We will consider an SLO rotation after the HLC review.

5. Future plans include providing training to the Assessment committee members on curriculum mapping. The intention is to have the Assessment teams to introduce the concept of curriculum mapping to the faculty during their review of assessment plans.
